VitrA Protect

VitrA Protect

VitrA özel olarak parlatılmış porselen karolar için, VitrA Protect teknolojisini geliştirdi. Üretimden çıkan parlak porselen karoların yüzeyine yapılan bir uygulama ile taşlama esnasında ortaya çıkan boşluklar doldurulurken, gerek kir ve lekelerin yüzeye yerleşmesi engellenir, gerekse karoların parlaklığı korunur.

VitrA Protect

The VitrA Protect process is an additional treatment carried out at the manufacturing stage for polished porcelain tiles. Eliminating the need for time-consuming anti-staining treatments at the laying stage, this innovative treatment seals the tiny micropores of polished tiles, making it impossible for dirt to penetrate – all without affecting a tile's beautifully polished appearance.

VitrA Protect

Das VitrA Protect-Verfahren ist eine Zusatzbehandlung, mit der poliertes Feinsteinzeug während der Herstellung veredelt wird. Durch Versiegelung der winzigen Fliesen-Mikroporen erspart dieser Prozess zeitraubende Fleckenschutz-Nachbehandlungen während des Verlegens. Das Eindringen von Schmutz wird wirksam verhindert, ohne den wunderschönen Glanz der Fliesen zu beeinträchtigen.

VitrA Protect

VitrA Protect est un procédé de traitement complémentaire spécialement conçu pour les carreaux en grès cérame poli ; il est effectué au cours de la production. Grâce à ce procédé, il devient inutile d'appliquer le fastidieux traitement anti-taches qui intervient usuellement après la pose du carrelage. Ce procédé innovant obture les pores microscopiques des carreaux polis, de telle sorte que les impuretés ne peuvent plus s'y incruster ; et bien sûr, ce procédé n'altère nullement l'éclat des carreaux.

VitrA Protect

Технология VitrA Protect — это дополнительная обработка полированной керамической плитки в процессе ее производства. Данная технология позволяет избавиться от необходимости проводить длительную обработку плитки для удаления пятен на ее поверхности на стадии укладки. Герметизация микропор полированной плитки препятствует проникновению в них грязи, при этом, не нарушая целостности и видовых качеств полированной поверхности.

Temizlik ve Bakım Talimatı
Döşeme Sonrası Temizlik

Döşeme sonrası, yüzeydeki derz film tabakası kısa bir zaman aralığında kurumaya başladığı esnada mutlaka temizlenmeli, yüzeyde sertleşmesine izin verilmemelidir. Bu esnada derzi temizlemek için sadece su ve sünger yeterli olacaktır.

Karo yüzeyinde derz dolgu kalıntılarının sertleşmesi durumunda, bu bölgelere tutunacak kirler, karo yüzeylerinin temizlenmesini zorlaştıracaktır. Bu durumdaki yüzeyler ancak özel kimyasallarla temizlenebilir. Bu tip özel temizleyiciler, kimyasalın üreticisi tarafından belirtilen şekilde kullanılmalıdır. Döşeme sonrası temizliklerde karo yüzeyleri yeterli miktardaki suyla durulanmalıdır. Diğer taraftan, yüzeyi asite hassas karolar (metalik yüzeyliler vb.), yalnızca su ve nötr temizlik malzemesiyle temizlenmelidir.

Periyodik Rutin Temizlik

Düzenli olarak yapılacak temizliğin sıklığı, karonun döşendiği yerdeki kirlenme potansiyeline ve karonun yüzey özelliğine göre (antislip vb.) bağlı olarak, haftalık, günlük veya günde birkaç kez olacak şekilde değişebilir.

Karolar düzenli olarak vakumlama yöntemiyle ve suyla yıkanarak temizlenmelidir. Ayrıca kirlenme yüküne ve yüzeyine bağlı olarak temizlik deterjanları da kullanılabilir. Suyla temizlik yapıldığında, yüzeyde kalan kirli su, yeterli miktarda temiz su kullanılarak giderilmelidir. Bu durulama, karolar kuruduğunda yüzeyde kalabilecek kirliliği önleyecektir. Ayrıca, karo yüzeyleri, temiz bir kuru bez kullanılarak da silinebilir.

Büyük ölçekli alanlar döner, silindirik fırçalı makinelerle temizlenebilir. Bu tip makineler, uygun hıza ayarlanarak, su-deterjan karışımının yüzeye işlemesi sağlanmalıdır. Daha sonra temiz su kullanarak durulama tamamlanmalıdır.

Zaman zaman, yabancı maddeler karo yüzeyinde leke bırakabilir. Böyle durumlarda lekenin özelliğine göre uygun bir temizleyici kullanılarak temizlik yapılmalıdır. Hassas yüzeyli karolar (metalik yüzey gibi) temizlenirken, yalnızca su ve nötr deterjanlar kullanılmalı ve temizlik öncesi kimyasalın yüzeye etkisi küçük bir alanda denenmelidir.

Hidroflorik asit içeren temizleyiciler, seramik yüzeyi parçalama özelliği olduğu için kesinlikle kullanılmamalıdır. Ayrıca, aşındırıcı ekipmanlarla yapılacak uygun olmayan temizlik işlemlerinden, karonun kaymazlık özelliklerini olumsuz yönde etkileyeceği için, kaçınılmalıdır. Bazı temizlik malzemeleri karo yüzeyinde film tabakası bırakabilmektedir; bu tabaka karonun kirlenmesine ve yüzeyin kayganlaşmasına neden olacağından, bu tip temizleyiciler kullanılmamalıdır.

Cleaning and Maintenance Instruction
Cleaning After Tiling

Once the tiles have been laid, any excess adhesive should be thoroughly removed and not be allowed to set on the tiles. At this stage, the cement layer can be removed using a wetted sponge.

Hardened cement residues can only be removed with special chemical cleaners. Any residual adhesive on the tile surface, will attract dirt which adheres to these residues, and makes the tiles difficult to clean. For this purpose, there exists many types of special cement film removers at the dealers. These cement removers must be used according to the instructions of the producer, after the cleaning the tiles must be rinsed thoroughly with plenty of clean water. Tiles with acid sensitive surfaces (such as metallic) should be cleaned with water and neutral agents only.

Regular Cleaning

The regular cleaning frequency and the method, clearly depends on the soiling load of the tiled area and the surface type of the tile (ie antislip surfaces). In other words, the period of regular cleaning may be changed as weekly, daily or several times in a day, it is directly related with the dirt which is brought in have to be removed

The tiles must be vacuum cleaned regularly, it is also possible to wash down with water occasionally, and you may need to add a commercial cleaning agent depending on the dirt. The dirty water must be removed from the floor entirely, for this reason, the floor should be rinsed with plenty of clean water. This prevents striping when the tiles are dry. The floor may also be cleaned with a dry cloth to remove any remaining dirt.

Especially large areas are most readily cleaned with rotary, cylindrical or reversing mechanical scrubbing machines. Those machines should be used at appropriate speed to permit the water detergent mixture on the floor to penetrate the dirt layer. After scrubbing operation, the process will continue with clean water, for rinsing the removed dirt.

As a precaution, cleaning agents containing hydrofluoric acid and its compounds must not be used, because it attacks ceramic material directly and damages the surface. For the tiles with acid sensitive surfaces (such as metallic surfaces, some specified as "B" in the catalogue), it is recommended to use only neutral detergent and water, before using any detergent, the effect must be checked in a small area. Also inappropriate cleaning such as with abrasive pads may negatively affect the slip-resistance properties. And some cleaning products may leave a film of grease that can attract dirt and make the surface slippery; therefore, using this kind of cleaning products must be avoided.

Reinigung- und Pflegehinweis
Reinigung nach dem Verlegen

Es ist empfohlen die Farbe des Fugenmaterials ähnlich zu der Farbe der Fliesen zu wählen. Nachdem die Fliesen verlegt worden sind, muss überflüssiges Zement auf den Fliesen sofort vollständig entfernt werden, gerade bevor es anfängt, zu trocknen. Bei der Entfernung des Zements können meistens Schwamm und Wasser benutzt werden.

Verhärtete Zementreste können nur mit speziellen chemischen Reinigungsmittel entfernt werden. Schmutz klebt an diese Reste, und dann wird es schwierig, die Fliesen zu reinigen. Zu diesem Zweck gibt es mehrere Arten von speziellen Zemententfernungsmittel bei den Händlern. Beim Benutzen diesen Zemententfernungsmitteln müssen die Herstelleranleitungen befolgt werden. Nach der Reinigung müssen die Fliesen mit sauberem Wasser gründlich gespült werden.

Periodische Pflege

Reinigungsintervalle für die Fliesen ändern sich in Bezug auf die Oberflächeneigenschaften der Fliesen und auf den Schmutzpotenziell der Aufstellorte. Die Fliesen müssen regelmäßig mit Staubsauger gereinigt werden und mit Wasser und geeignetem industriellen Reinigungsmittel abhängig von dem Schmutz gespült werden. Das schmutzige Wasser muss von dem Boden völlig entfernt werden, deshalb soll der Boden mit sauberem Wasser genügend gespült werden. Das verhindert die Streifen auf der Oberfläche der Fliesen, nachdem sie trocken sind. Der Boden kann auch mit einem trockenem Tuch gereinigt werden, um jeden Dreck zu entfernen. Wischen mit einem Mop konnte für strukturierten Fliesen nicht geeignet sein. Größe Bereiche mit glatten oder strukturierten Fliesen werden am besten mit rotierenden, zylindrischen oder umschaltbaren Putzmaschinen gereinigt. Diese Maschinen sollten mit langsamer bis mittlerer Geschwindigkeit rotieren.

Solche Maschinen haben meistens eine Trockensaugsvorrichtung. Falls diese Vorrichtung vorhanden ist, sollte man sie zunächst ausschalten, damit die beim Schrubbvorgang verwendete Lösung aus Wasser und Reinigungsmittel auf dem Fußboden besser in die Schmutzschichte eindringen kann. Als Vorsichtsmaßnahme, Reinigungsmittel, die Fluorwasserstoffsäure und ihre Verbindungen enthalten, dürfen nicht benutzt werden, weil sie die Keramik direkt angreifen und die Oberfläche beschädigen. Auch ungeeignete Reinigung wie zum Beispiel mit Scheuerpulver kann die Trittsicherheitseigenschaften beeinflussen. Manche Reinigungsmittel können eine Fettschichte hinterlassen, die den Schmutz anzieht, deswegen muss die Verwendung dieser Reinigungsmittel vermieden werden.

Instructions de nettoyage pour les carreaux ceramiques
Nettoyage après le Carrelage
Il est recommandé de choisir la couleur du matériel de jointoyage semblable à celle des carreaux. Une fois que les carreaux ont été posés, la couche de ciment doit être complètement enlevée dans peu de temps juste au moment où elle commence à sécher. A ce stade, la couche de ciment peut être enlevée surtout à l'aide d'une éponge et de l'eau.

Les résidus de ciment endurcis ne peuvent être enlevés qu'avec des produits chimiques de nettoyage spéciaux. La saleté adhère à ces résidus et rend difficile le nettoyage des carreaux.

A cette intention, il existe plusieurs types de dissolvants spéciaux de voile de ciment chez les négociants. Ces dissolvants de voile de ciment doivent être utilisés selon l'instruction du fabricant. Les carreaux doivent être rincés avec des quantités abondantes d'eau propre après le nettoyage.

Maintien Périodique
Le type et la fréquence du nettoyage régulier dépendent du type et du degré de saleté et de l'utilisation hébdomadaire, quotidienne ou plusieurs fois en une journée pour les zones beaucoup fréquentés.
Les carreaux doivent régulièrement être passés par l'aspirateur, il est également possible d'éponger ou de laver avec de l'eau à l'occasion, et il se peut que vous ayez besoin d'ajouter un agent nettoyant en fonction de la saleté. L'eau sale doit être complètement enlevée du sol, à cet effet le sol doit être rincé avec des quantités abondantes d'eau propre. Cela empêche les rayures quand les carreaux sont sechés. Le sol peut également être nettoyé avec un chiffon sec pour enlever la saleté restante. Particulièrement, les larges parties des carreaux de surface unie ou texturée sont plus facilement nettoyées à l'aide des machines de nettoyage mécanique rotatif, cylindrique ou inversé. Celles-ci doivent tourner à vitesse lente jusqu'à la vitesse moyenne. Telles machines sont fréquemment dotées d'un équippement de séchage à succion. Si c'est le cas, la machine doit en premier lieu être utilisée avec l'équippement de succion éteint pour permettre à la mixture d'eau et de détergent utilisée dans le processus de nettoyage de rester sur le sol pour pénétrer la couche de saleté. Laisser passer au moins 5 à 15 minutes, puis répéter l'opération de nettoyage mais seulement avec de l'eau propre et l'équippement de séchage à succion allumé. C'est le processus de rinçage qui enlève la saleté.

Comme précaution, les agents de nettoyage contenant de l'acide hydrofluorique et ses composés ne doivent pas être utilisés, car ils attaquent directement le matériel en céramique et endommagent la surface. Le nettoyage inapproprié comme par exemple celui avec des tampons abrasifs peut influencer les propriétés de résistance au glissement. Et certains produits de nettoyage peuvent laisser une couche de graisse qui peut attirer la saleté et rendre la surface glissante; par conséquent, il doit être évité d'utiliser ce genre de produits de nettoyage.

ИНСТРУКЦИЯ ПО ЧИСТКЕ ПЛИТКИ И УХОДУ ЗА НЕЙ
Чистка после укладки
Сразу после укладки плитки и затирки швов пол необходимо освободить от остатков клеевой и затирочной смесей и приступить к чистке. На этом этапе затирочная смесь может быть удалена с помощью влажной губки.

Затвердевшая смесь требует очистки специальной строительной химией. Если на поверхности имеются остатки смеси, то прилипшая к ним грязь сильно затрудняет процесс чистки. Для этой цели на рынке существует большое количество специальных средств. Эти средства необходимо использовать строго в соответствии с инструкцией производителя и после очистки поверхность нужно ополоснуть большим количеством чистой воды. Плитку, поверхность которой чувствительна к воздействию кислоты (например, металлическая), необходимо очищать только нейтральными реагентами (такая плитка отмечена литерой «B» в каталоге).

Регулярный уход
Частота чистки плитки и метод ухода за ней зависят от степени загрязняемости облицованной поверхности и ее типа (например, антискользящая). Другими словами, период между проведением уборки может варьироваться от одного раза в неделю до нескольких раз в день. Нужно регулярно чистить плитку вакуумным способом, возможно также иногда окатывать поверхность водой, кроме того, Вам может понадобиться добавка специального промышленного состава для чистки при определенной степени загрязнения поверхности. Грязную воду необходимо полностью удалить с пола, окатив его большим количеством воды. Это предотвращает появление разводов при высыхании поверхности. Также можно протереть пол сухой тряпкой для удаления пыли. Что касается больших площадей, то они легко очищаются механическими чистящими машинами с вращающимися, цилиндрическими или крутящимися элементами. Эти механизмы должны использоваться на той скорости, при которой смесь чистящего средства будет задерживаться на поверхности пола и пропитывать слой загрязнения. После процедуры очистки, процесс необходимо продолжить с использованием чистой воды, чтобы смыть растворившуюся грязь.
Предупреждение: чистящие средства, содержащие фтористоводородную кислоту и ее составляющие использовать нельзя, поскольку данные компоненты разрушают керамику и повреждают поверхность. Для плитки с поверхностями, чувствительными к кислоте (например, металлические поверхности, обозначенные как «B» в каталоге), рекомендуется применять нейтральные чистящие средства и воду, а перед тем, как использовать какое-либо средство, оно должно быть опробовано на небольшом участке. Неправильная очистка, например, с применением абразивных материалов, может негативно отразиться на противоскользящих свойствах плитки. Некоторые чистящие средства могут оставлять после себя жирную пленку, которая может притягивать загрязнения и делать поверхность скользкой, следовательно, подобные чистящие средства применять не желательно.

Fileleme

Özellikle ıslak mekanlar için küçük ebatlı karolar 297 x 297 mm ebadında levhalar oluşturacak şekilde filelenir. Geleneksel kağıt ve naylon filenin yanı sıra yeni bir teknoloji ile üretilen "dot mounting" fileleme yöntemi ayrıca isteğe bağlı olarak önden kağıt ve naylon fileleme de uygulanabilir.
"Dot Mounting" seçeneğinde karolar polyester katkılı bir malzeme ile noktalar halinde birleştirilir; bu sayede fileli karolar hem dış mekanda, hem de ıslak ortamlarda rahatlıkla kullanılabilir.
Dot Mounting, kağıt ve naylon filenin avantajları:
- Basit, hızlı döşeme
- Mozaiklerin daha kolay tasarlanması
- Renk kombinasyonları

Dot Mounting'in kağıt ve naylon fileye göre avantajları:
- Sudan etkilenmez
- Yüksek yapışma mukavemeti
- Tam ölçüsünde derz kesimi

Islak alanlar için üstten file ve dot mount file uygulaması önerilir.

Mesh mountings

For simpler and faster laying, easier mosaic creation, color combinations and the special requirements of wet areas, tiles can be pre-glued at the factory to make easy-to-lay laid 297 x 297 mm tile mats of small format tiles. In addition to traditional plastic and paper mesh mounting, VitrA's innovative new dot mounting method fixes tiles together at the sides with dots of adhesive. Dot mounted tiling is unaffected by water and remains firm even in the most demanding environments – its advantages are superior water resistance, improved bonding with underlying surfaces, and precise joints.
Benefits of dot mounting, paper mesh and plastic mesh mounting:
- More simple and faster to lay
- Easier to create mosaics
- Color combinations

Advantages of dot mounting compared to paper mesh and plastic mesh methods:
- Water resistant
- Improved bonding with the underlying surface
- Precise joints

Top net or dot mount net application is recommended for wet spaces

Netzverklebungen

Um das Verlegen schneller und problemloser zu machen, Mosaikkreationen und Farbkombinationen zu erleichtern und den besonderen Anforderungen von Nassbereichen zu entsprechen, können Fliesen werkseitig mit Verklebungen versehen werden. So entstehen leicht zu verlegende 297 x 297 mm-*Matt*en aus kleinformatigen Fliesen.
Zusätzlich zu der traditionellen Kunststoff- und Papiernetzverklebung bietet VitrA jetzt eine Innovation: das Dot Mounting. Dabei werden Fliesen seitlich punktuell mit Kunststoff verbunden, was die Beläge wasserunempfindlich und extrem strapazierfähig macht. Dot Mounting sorgt aber nicht nur für erhöhte Wasserresistenz, sondern bietet auch eine verbesserte Haftung auf dem Untergrund und einen exakten Fugenschnitt.
Vorteile von Dot Mounting, Papiernetz und Kunststoffnetz:
- Einfachere, schnellere Verlegung
- Vereinfachte Gestaltung von Mosaiken
- Farbkombinationen

Vorteile von Dot Mounting gegenüber Papier- und Kunststoffnetz:
- Nässe unempfindlich
- Bessere Haftung mit dem Untergrund
- Exakter Fugenschnitt

Hiermit wird Net- oder Dot Mount-Anwendung für Nassbereiche empfohlen.

Pose

Pour simplifier et accélérer la pose, pour faciliter la réalisation de mosaïques, l'association de différentes couleurs et pour répondre aux impératifs des milieux humides, les carreaux petits formats peuvent être livrés en panneaux de 297 x 297 mm assemblés en usine, très faciles à mettre en œuvre. Parallèlement au collage traditionnel sur trame nylon ou papier, VitrA propose un système original et tout nouveau, le Dot Mounting: les carreaux sont reliés entre eux par des points de colle. Grâce à ce système d'assemblage, les revêtements sont insensibles à l'eau et restent stables même dans les environnements les plus exigeants. Il présente plusieurs avantages : forte insensibilité à l'eau, excellente adhérence au support, grande précision des joints.
Les avantages de Dot Mounting, trame papier et trame nylon :
- La pose est plus simple et plus rapide
- La réalisation de mosaïques s'en trouve simplifiée
- On peut réaliser des combinaisons de couleurs.

Les avantages de Dot Mounting par rapport à la trame papier ou nylon :
- Il est insensible à l'humidité
- Il offre une meilleure adhérence avec la chape
- L'alignement des joints est parfait.

Pour les espaces humides, il est conseillé d'utiliser du filet par dessus ou du filet dot mount.

Укладка

Для облегчения процесса укладки и создания различных мозаичных рисунков и цветовых комбинаций, а также для укладки в помещениях с повышенной влажностью, плитка может быть предварительно наклеена на основу в заводских условиях и укомплектована в модули размером 297x297 мм, состоящие из плиток малого формата. Наряду с традиционными методами крепления на пластиковую или бумажную сетку, VitrA применяет инновационный метод соединения сторон плитки с помощью «точек» из связующего материала. Системы точечного крепления плитки водонепроницаемы, прочны и устойчивы к сильному механическому воздействию. К преимуществам такого крепления относятся превосходная водостойкость, улучшенное сцепление с подстилающей поверхностью и идеально ровные стыки.

Преимущества наличия крепления:
- Более простая и быстрая укладка
- Легкое создание мозаики
- Возможность комбинации цветов

Преимущества точечного крепления перед иными способами:
- Водонепроницаемость
- Улучшенное сцепление с поверхностью
- Точное соединение

Во влажных помещениях рекомендуется применение сетки или сетки в точке монтажа.

Parlak karolar hakkında

Parlak karo malzemesi, parlatma işleminden sonra çok yüksek olan teknik özelliklerini korumasına karşın, üst yüzeyinde oluşan mikroskopik gözenekli yapısı lekelenmeyi kolaylaştırır. Ancak estetik kalitesi ve canlı renkliliği nedeniyle tercih edilir. Aynı nedenle oluşan parlak yüzeyin aşınma dayanıklılığı (MOHS) parlatılmamış malzemeninkinden daha düşüktür. Lekelenme durumunda lekenin kalıcı olmaması için hiç bekletmeden özel olarak üretilmiş leke çıkarıcı malzemelerle temizlenmesi gerekmektedir.

Bununla birlikte lekelenmeyi önlemeye yönelik piyasada farklı markalarda yüzey koruyucu ürünler bulunmakta olup, döşeme sonrası bunlarla kaplama yapılabilir. Ayrıca VitrA kullanıma hazır Protect kodlu lekelenmeyi önlemeye yönelik uygulama yapılmış ürünler üretmektedir.

A reminder about polished tiles

Although a polished tile will preserve its superior technical specifications, the formation of its microscopic pores makes it susceptible to staining. For the same reason the surface of the polished material has a lower hardness resistance measure than its matt version on the MOHS scale. In the case of staining it is recommended to use cleaning agents by specialised producers immediately after contact.

There are different kinds of surface protection agents in the market which can be used after the tiles have been laid. VitrA suggests using Protect which is a ready-to-lay application on polished porcelain tiles.

Über poliertes Feinsteinzeug

Obwohl poliertes Feinsteinzeug nach dem Polieren all seine hochtechnischen Eigenschaften behält, wird es durch die mikroporöse Oberfläche sensible gegen Flecken. Poliertes Feinsteinzeug wird wegen seiner ästhetischen Qualität und Farbigkeit bevorzugt. Wegen den selben Grund hat es einen geringeren Abriebswert auf der MOHS-Skala im Vergleich des *matt*en Feinsteinzeuges. Wenn es beschmutzt wird, soll die Oberfläche gleich mit speziellen Reinigern gereinigt werden. Es gibt verschiedene Versiegelunsmittel auf dem Markt, die man nach dem Verlegen verwenden kann. Es wird empfohlen, die Protect Versiegelung auf den polierten Fliesen zu verwenden, die auf Wunsch im Werk von VitrA appliziert wird.

A propos des carreaux grès cérame poli

Bien qu'un grès cérame poli préserve ses caractéristiques techniques supérieures, la formation de ses pores microscopiques le rend susceptible pour la souillure. Pour la même raison, la surface du grès cerame poli a une mesure inférieure de résistance de dureté par rapport a un grès cérame *matt* sur l'échelle de Mohs. Dans le cas de la souillure, a fin qu'elle ne soit pas permanente, il est recommandé de nettoyer sans attendre avec des produits d'épuration specialement fabriqués pour ce genre de nettoyage. Malgré tout les grès cérames polis sont préférables grace a leurs qualités esthétique et leurs couleurs vivantes.

Il ya plusieurs marques de produit pour la protection des surfaces des grès cérames polis et ces produits empêchent aussi la souillure.Il est possible de les appliquer meme apres la pose.

De plus, Vitra fabrique des produits avec le code Protect qui sont prêt a utiliser et qui l'usage de ne pas tenir de tâche.

Особенности полированной плитки

техническим требованиям своей категории, наличие микроскопических пор определяет ее способность к окрашиванию. По этой причине полированная поверхность имеет меньшую стойкость к истиранию, чем матовая. В случае загрязнения или окрашивания рекомендуется использовать специальные реагенты профессиональных производителей непосредственно сразу после контакта с красящим веществом.

На рынке представлено большое количество средств по уходу за поверхностью, которые могут использоваться после укладки плитки. VitrA предлагает нанесение на полированный керамогранит защитного слоя Protect, который избавит Вас от использования дополнительных средств.

Ⓟ VitrA Protect Malzeme Temizliği
Karolar kirlenmeye karşı önlem olarak VitrA Protect teknolojisi ile kaplanmış olup, yüzeyde görülen matlık uygulanan koruyucu malzeme sebebiyledir. Karolar, döşeme ve derz uygulama sonrası yüzey temizliği yapılmasıyla parlak görüntüsüne kavuşacaktır. Döşeme sonrası karo yüzeyleri yeşil renkli sünger (örneğin 3M yeşil sünger) ile mineral katkılı krem temizlik malzemeleri (örneğin Viss Scheuer Milch Citrus) kullanılarak cam siler gibi dairesel hareketlerle orta sertlikte ovalanarak yüzeyden alınabilir. Büyük mekan uygulamalarında döner fırça yardımıyla benzer şekilde yüzey temizliği sağlanabilir.

VitrA Protect Material Removing
VitrA Protect process is an additional treatment carried out at the manufacturing stage for polished tiles. The process eliminates the need for time-consuming anti-staining treatments at the laying stage.
Due to this process, the tiles with VitrA Protect have a thin film layer. After installation of the tiles, it can be removed by using mineral added cream cleaning agent (such as Viss Scheuer Milch Citrus, Cif Cream or similar) and a mid-hard (green) sponge (such as 3M green sponge or similar). The tiles must be scrubbed in circular motion. For wide areas, brushing machine can be used to clean the film using the same kind of sponge and cleaning agents specified above.

Удаление защитного слоя VitrA Protect
Технология VitrA Protect обеспечивает защиту полированной поверхности плитки от пятен благодаря дополнительной обработке материала на стадии производства. Это позволяет избежать трудоемкого процесса по удалению загрязнений, возникающих в процессе укладки.
В результате нанесения защитного слоя VitrA Protect, на поверхпости плитки образуется тонкий слой пленки. После завершения укладки, пленка может быть удалена с использованием кремообразных чистящих средств (например, Viss Scheuer Milch Citrus, CIF Cream и др.) и жесткой стороны губки (например, зеленой губки 3M или аналога). Пленку необходимо стирать круговыми движениями. Для больших площадей можно использовать машины для уборки с аналогичной губкой и чистящими средствами, перечисленными выше.

Ⓡ Ürünlerin kenarları rektifiye edilmiştir.
The edges are rectified.
Края ректифицированы.

Ⓢ Ürünlerin yüzeyi kaymazlık özelliği nedeniyle rölyefli ve strüktürlüdür. Bu tip yüzeylerin temizlenmesi düz yüzeylere göre daha zordur. Derz uygulaması biter bitmez, yüzeyin sünger kullanarak bol suyla temizlenmesi çok önemlidir. Bu işlem zemin tamamen temizlenene kadar tekrar edilmelidir.

Due to their special features, rough or structured anti-slip surfaces are harder to clean. After the grouting, it is important to remove the excesses in a short time and by frequent washing with sponge and water, till the floor is perfectly clean.

Уход за продукцией с антискользящими свойствами сложнее из-за рельефной или структурированной поверхности плитки. Очень важно очистить плитку с помощью мочалки большим количеством воды сразу после нанесения затирки. Это действие нужно повторить до окончательного очищения поверхности.

Ⓣ Ürünlerin üzerinde metalik sır vardır. Metalik yüzeyin ışıkla yansıma yapmasından dolayı, aynı kutudan çıkan ürünler arasında matlık-parlaklık, açıklık-koyuluk gibi farklar görülebilmektedir.

The product has a metallic glaze. Due to the reflection of light, there can be differences in color and surface mattness-glossiness of products from the same box.

Поверхность продукции покрыта металлической глазурью. По причине отражения света на металлической поверхности возможны небольшие визуальные отличия такие как степень глянцевости и матовости и цветовые оттенки между плитами, находящимися в одной коробке.

Ⓤ Dekorların üzerindeki özel teknik nedeniyle, karo yüzeyinde, eskitilmiş etkisi görülebilir.
Due to special technique on the decors, there can be worn out effect on the tiles.
